Raw Mulching Power!

With the acquisition of the "Iron Wolf" Roto Slasher W. Pidhirney Welding Ltd, sets the standard for environmentally friendly mulching & clearing operations.

Born in the permafrost of Alaska!

Originally designed for chewing through frozen gravel in mining operations in Alaska. The Iron Wolf is ready for any task that you can throw at it.

Attached to a dozer, the Roto Slasher is used for clearing standing trees, brush and stumps in one pass up and one pass back. This environmentally friendly wonder mulches as it works and incorporates the debris back into the soil to create a stable soil base and eliminates burning and root raking. The Roto Slasher is the only technically sound and cost effective tool to avoid or mitigate impact on cultivated lands when the stripping of frozen topsoil is required.

DOZER MODEL

- Caterpillar D6R or equivalent

SLASHER COMPONENTS

- (1) Caterpillar® C-15 engine 525 HP
- (2) Rexroth® variable volume hydraulic pumps
- (2) Rexroth® variable volume hydraulic motors
- (2) Planetary drum drives
- (1) Cutter Drum - 10 feet wide, 40 inches diameter
- (2) Proprietary IronWolf planetary alignment assemblies
- (1) Mexabil® radiator, charge air cooler, bottom tank aux. cooler and hydraulic oil cooler
- (1) Hydraulic accumulator
- (1) C - frame for track-type tractor

APPLICATIONS

- Clearing and mulching standing trees, brush & stumps
- Creating a clear, stable soil base
- Site clearing & site preparation, stands up to rocks in soil
- Site excavation of frozen soil with little or no mixing of sub soil into top soil
